Research Activities

From 1967 (my Ph.D.) until 1980, I had a modest size research program, but from 1983 to 2016, I have led research activities that ranged from 20-50 people in size with annual budgets of \$2M-\$5M dollars. I had a major role in but did not lead several large projects in the 1976-2000 time period, including the CRPC Science and Technology Center and significant particle physics experiments at Fermilab. My research has ranged over many areas but dominantly focused on practical uses of computing, an interest spurred by undergraduate research experiences. Below I list research thrusts as overlapping focus periods. Details can be found in books and papers and at the [website](#) for current projects. In the 2005-2015 time period, two large projects were FutureGrid (where I was PI) and the CReSIS Science and Technology Center (co-PI).

For the last 5 years, my research areas are described in items 15-24 below with a major focus on work at the interface of HPC and Big Data with, especially the \$1M a year SPIDAL project that I led. This is illustrated in the figure below. A lot of the contributions to SPIDAL came from the six other participating organizations as Indiana only received about 30% of the funds, and so one

needs to look at the total project to gauge the value of this research. We summarized the project for algorithms, communities (applications), and middleware in <http://dsc.soic.indiana.edu/publications/SPIDALPaperSept2018.pdf>, which is published as a book chapter by IOS Press and an unpublished summary update <http://dsc.soic.indiana.edu/publications/SPIDAL%20Perspectives%202020-Final.pdf> in Fall 2020.

Major progress in my research through SPIDAL is illustrated by the release of Twister2, a Big Data programming environment that integrates ideas of HPC, our older system Twister, Spark, Apache Storm (Heron), and Hadoop. Unlike other approaches, we built the software as a toolkit with each component carefully designed to satisfy big data requirements and make the best use of HPC. The focus of Twister2 on data management and engineering has led to Cylon, which supports today's Python machine learning environment and addresses the growing importance of GPUs. My interest in algorithms has focused on deep learning to build deep learning simulation surrogates and time series. I have helped MLCommons/MLPerf start a new activity in science data. Since moving to Virginia University, I am beginning new research on the cyberinfrastructure needed to support the work of the Biocomplexity Institute, of which I am a member.

Publications: Introduction

According to Google Scholar <https://scholar.google.com/citations?user=dJ-fD-sAAAAJ>, I have 42185 citations, 1851 papers of which 585 have at least 10 citations, and I have an h-index of 86. (as of March 5, 2023). The chart below gives citations per year from Google Scholar from 1981 to 2022.

Google Scholar tends to be liberal in its definition of a “paper” (conference committee pages are included for example), but there are very few “papers” not written by me in this sample. The listings in the CV identify 1337 “papers”. ResearchGate lists 1454 “research items” for me at https://www.researchgate.net/profile/Geoffrey_Fox on March 5, 2023.

The publications in this CV start with full Books, Lecture and Course notes, and open-source Software systems. Then the “real” papers are organized in groups starting with those from January 2005 to March 2023. These are divided into conventional categories separating journal, book, and conference contributions. This is followed by a set from 1967-1990 and then the set from 1990-2004 with only unpublished technical reports separated. The website <http://www.infomall.org> contains recent online material and <http://salsahpc.indiana.edu/dlib/home/>, <http://www.old-npac.org>, <http://www.new-npac.org/users/fox/>, and <http://www.new-npac.org/projects/> material from before 2001. I do not list presentations in this CV; the websites above list most of my presentations and are approximately complete since 1990, although only presentations while I am at Indiana University (July 2001 onwards) are easy to find at <http://www.dsc.soic.indiana.edu/presentations>.
